

As per first global investigation it came to notice that,

1. Environmental damage caused to ecosystem has been majorly done by developed nations in the world.
2. The western culture has maintained high living standard.
3. All facilities are implemented to ease public's life.
4. Developed nations inculcate more into the importance of facilities, equality and education.
5. In today's world ecosystem is being drastically damaged by developed nations in world. The condition is matter of concern for everyone and the one blamed is developed one.
6. They are responsible for destruction of land and other resources during world wars.
7. In last two centuries developed nations have gone through industrialisation and commercialisation which has led to degradation.
8. Production of carbon, emissions and masses of air, land and water pollution is result of industrialisation.
9. The people of developed nations make more use of earth resources.
10. They also contribute most to the generation of waste in comparison to developing nations..]
11. Consumption of resources and production of pollutants is higher there.
12. UN ecosystem report stated that developed countries are responsible for nearly 85% consumption of resources and production of 80% of wastes.
13. Major wars caused destruction of land and resources.
14. Industrialisation, new inventions, researches in developed countries have led to carbon emission, water pollution as well as contribution to greenhouse gases into our environment.
15. Industrialisation also led ecosystem towards global warming.
16. Manufacturing sectors produce most smoke that pollutes air.
17. Developed countries have higher number of vehicles which produce more gas that depletes ozone layer.
18. Sulphur, nitrogen, carbon emissions from machines, cars have led to acid rains.
19. Instead of having capacity and resources to stop climatic damage those countries are reluctant to do so.
20. They have financial means to exploit natural resources and nuclear facilities and labs continue to harm our climate due to dumping of chemicals.
21. They acquired technology, infrastructure and standard of living largely through use of pollution-intensive industrialisation.
22. And also economical and environmental damage caused to developing nations by richest countries amounts to more than third world debt.
